

# Preface

This volume presents a set of papers accompanying the lectures of the 12th International School on Formal Methods for the Design of Computer, Communication and Software Systems (SFM).

This series of schools addresses the use of formal methods in computer science as a prominent approach to the rigorous design of the above-mentioned systems. The main aim of the SFM series is to offer a good spectrum of current research in foundations as well as applications of formal methods, which can be of help for graduate students and young researchers who intend to approach the field.

SFM 2012 was devoted to model-driven engineering and covered several topics including modeling languages, model transformations, functional and performance modeling and analysis, and model evolution management.

This volume comprises 11 articles. Selic's paper reviews how UML has changed over time and what new features it can provide that support not only informal lightweight sketching in early phases of development, but also full implementation capability. The paper by Andova, Van Den Brand, Engelen, and Verhoeff discusses the basic aspects of model-driven engineering in combination with textual domain-specific languages developed using the language invention pattern. Cabot and Gogolla present a comprehensive view of OCL and its applications including the use for expressing model transformations, well-formedness rules, and code-generation templates. The paper by Di Ruscio, Eramo, and Pierantonio introduces a classification of model-transformation approaches and languages and illustrates the characteristics of the most prominent ones. Giese, Lambers, Becker, Hildebrandt, Neumann, Vogel, and Wätzoldt show that graph transformations can be employed to engineer solutions for model-driven development, dynamic adaptation, and models at run time. The paper by De Caso, Braberman, Garbervetsky, and Uchitel deals with enabledness-preserving abstractions, which are concise representations of the behavior space for software engineering artifacts such as source code and specifications. Petriu, Alhaj, and Tawhid consider quantitative performance analysis of UML software models annotated with performance attributes according to the MARTE profile and describe a model-transformation chain that enables the integration of performance analysis in a UML-based software development process. Becker's paper gives an overview on the process of model-driven quality analyses with a special focus on issues that arise in fully automated approaches. The paper by Cortellessa, Di Marco, and Trubiani addresses the problem of capturing performance problems in the software design process by means of software performance antipatterns. Brosch, Kappel, Langer, Seidl, Wieland, and Wimmer offer an introduction to the foundations of model versioning, the underlying technologies for processing models and their evolution, and the state of the art in the field. Finally, the paper by Vallecillo, Gogolla, Burgueño, Wimmer, and Hamann presents model-transformation

specification and testing by discussing and classifying some of the existing approaches and introducing a generalization of model-transformation contracts.

We believe that this book offers a useful view of what has been done and what is going on worldwide in the field of formal methods for model-driven engineering. We wish to thank all the speakers and all the participants for a lively and fruitful school. We also wish to thank the entire staff of the University Residential Center of Bertinoro for the organizational and administrative support.

June 2012

Marco Bernardo  
Vittorio Cortellessa  
Alfonso Pierantonio

# Table of Contents

The Less Well Known UML .....	1
<i>Bran Selic</i>	
MDE Basics with a DSL Focus .....	22
<i>Suzana Andova, Mark G.J. van den Brand, Luc J.P. Engelen, and Tom Verhoeff</i>	
Object Constraint Language (OCL): A Definitive Guide .....	59
<i>Jordi Cabot, Martin Gogolla</i>	
Model Transformations .....	92
<i>Davide Di Ruscio, Romina Eramo, Alfonso Pierantonio</i>	
Graph Transformations for MDE, Adaptation, and Models at Runtime ..	138
<i>Holger Giese, Leen Lambers, Basil Becker, Stephan Hildebrandt, Stefan Neumann, Thomas Vogel, Sebastian Wätzoldt</i>	
Abstractions for Validation in Action .....	194
<i>Guido de Caso, Victor Braberman, Diego Garbervetsky, Sebastian Uchitel</i>	
Software Performance Modeling .....	220
<i>Dorina C. Petriu, Mohammad Alhaj, Rasha Tawhid</i>	
Model Transformations in Non-Functional Analysis .....	264
<i>Steffen Becker</i>	
Software Performance Antipatterns: Modeling and Analysis .....	291
<i>Vittorio Cortellessa, Antinisca Di Marco, Catia Trubiani</i>	
An Introduction to Model Versioning .....	338
<i>Petra Brosch, Gerti Kappel, Philip Langer, Martina Seidl, Konrad Wieland, Manuel Wimmer</i>	
Formal Specification and Testing of Model Transformations .....	401
<i>Antonio Vallecillo, Martin Gogolla, Loli Burgueño, Manuel Wimmer, Lars Hamann</i>	
<b>Author Index</b> .....	439

# **The Less Well Known UML**

Bran Selic

# **MDE Basics with a DSL Focus**

Suzana Andova, Mark G.J. van den Brand, Luc J.P. Engelen, and Tom Verhoeff

# **Object Constraint Language (OCL): A Definitive Guide**

Jordi Cabot, Martin Gogolla

# Model Transformations

Davide Di Ruscio, Romina Eramo, Alfonso Pierantonio

# **Graph Transformations for MDE, Adaptation, and Models at Runtime**

Holger Giese, Leen Lambers, Basil Becker, Stephan Hildebrandt, Stefan  
Neumann, Thomas Vogel, Sebastian Wätzoldt

# **Abstractions for Validation in Action**

Guido de Caso, Victor Braberman, Diego Garbervetsky, Sebastian Uchitel

# **Software Performance Modeling**

Dorina C. Petriu, Mohammad Alhaj, Rasha Tawhid

# Model Transformations in Non-Functional Analysis

Steffen Becker

# **Software Performance Antipatterns: Modeling and Analysis**

Vittorio Cortellessa, Antiniscia Di Marco, Catia Trubiani

# **An Introduction to Model Versioning**

Petra Brosch, Gerti Kappel, Philip Langer, Martina Seidl, Konrad Wieland,  
Manuel Wimmer

# **Formal Specification and Testing of Model Transformations**

Antonio Vallecillo, Martin Gogolla, Loli Burgueño, Manuel Wimmer, Lars Hamann

## Author Index

- Alhaj, Mohammad 220  
Andova, Suzana 22
- Becker, Basil 138  
Becker, Steffen 264
